

ASPIRE FOR HER × LOGITECH

🏆 In collaboration with AICTE & applied for “Guinness Book of World Records”

Women Who Master — Individual GenAI Hackathon Submission

Submitted by: Geethika Dasari | Roll number: WWM26-VIZ-G-T074-L01

Location: Visakhapatnam

NIRA

A private, multilingual AI health-navigation companion.

THE JOURNEY

WHY SHE MAY DELAY SEEKING CARE?

- Uncertainty – “Is this normal?”
- Normalization – Maybe I’m overreacting
- Lack of awareness – I don’t know enough
- Financial concern – Can I afford care?
- Communication barrier – Who can I talk to?

WHAT NIRA DOES

- Understands your concern with minimum information
- Explains in simple, plain language
- Navigates the appropriate next step (Monitor / Consult / Seek urgent care)
- Prepares you for an informed consultation
- Protects your privacy and safety

KEY CAPABILITIES

- Multilingual & simple-language support
- Safety-first navigation with red-flag escalation
- Converts medical terms into understandable language
- Question generator for healthcare consultation
- Non-diagnostic: Education, guidance and preparation only

SPECIFIC FOCUS
Menstrual-health navigation

The problem isn't always the symptom. It's the **uncertainty** around it.

Who experiences it

Women experiencing menstrual-health changes

What currently happens

They delay or avoid seeking care due to uncertainty, stigma, or barriers

The unmet need / gap

A trustworthy layer between confusing information and professional care

Why it matters

Delays can lead to worsening conditions, stress, and poorer health outcomes

Success outcome

A woman moves from “I don’t know whether this matters” to understanding the concern, knowing an appropriate next step, and being prepared to speak with a healthcare professional.

NIRA

A private, multilingual
AI health-navigation
companion for women.

It turns uncertainty about menstrual-health changes into understanding, safe next steps, and better preparation for professional care.

★ MAIN FEATURES & OUTPUTS

- Plain-language explanation (not a diagnosis)
- Safety-first next step:
Monitor / Consult / Seek urgent care
- My Consultation Card:
key points & questions to ask
- What to track: key patterns & symptoms
- Multilingual support:
English (Standard & Simple),
Telugu (Simple)
- Privacy-first: collects only minimum
necessary information

CORE USER JOURNEY

GENAI MODEL / CAPABILITY USED

Amazon Bedrock (Claude 3 Haiku / Claude 3 Sonnet)

- Natural language understanding & conversation
- Information synthesis from trusted medical references
- Plain-language & multilingual explanation
- Safety classification & next-step navigation
- Question generation & summarization

WHAT MAKES NIRA DISTINCTIVE

Not a symptom checker. A navigation layer between uncertainty and care.

Converts confusion into clarity, safety, and action.

Focused on what matters most: understanding, next steps, and consultation readiness.

WHAT WORKS IN THE PROTOTYPE TODAY

- ✓ User inputs minimal information about menstrual-health changes
- ✓ Generates plain-language understanding in English & Simple modes
- ✓ Provides safe next-step guidance (Monitor / Consult / Urgent)
- ✓ Creates Consultation Card with key points & questions
- ✓ Suggests what to track (key patterns & symptoms)
- ✓ Privacy notice and responsible AI guardrails built-in

CONCEPTUAL / PLANNED (NOT IN MVP)

- Personalized cycle tracking
- Doctor / clinic recommendations
- Appointment booking integration
- Long-term health history dashboard

WORKING PROTOTYPE

Live on AWS PartyRock

PartyRock Link: <https://partyrock.aws/u/NIRA>

NIRA does not diagnose, prescribe, or replace a healthcare professional.
It helps you understand, navigate safely, and take the right next step.

Your privacy. Your pace.
You stay in control.

11:00 AM | EARLY BUILD

Initial prototype

- Selected menstrual-health focus
- Defined NIRA's core journey
- Built the first PartyRock structure
- Tested the initial prompt

From a basic concept to a tested health-navigation prototype through rapid iteration and prompt refinement.

02:00 PM | DEVELOPED BUILD

Refined prototype

- Improved prompt and response quality
- Added safety-first navigation
- Added consultation preparation
- Tested multilingual/simple-language responses

AWS PartyRock, ChatGpt & Gemini

Purpose

Built and refined NIRA as a working GenAI health-navigation prototype.

Prompt Iterations

Understand — “Understand the user’s menstrual-health concern.”

Explain — “Explain in simple language without diagnosing.”

Navigate — “Identify red flags, suggest the next step, and prepare questions for a healthcare professional.”

Generate — “Create clear, minimal, visually engaging PPT slides in a simple, easy-to-understand format.”

Refinement

Broad responses → safety boundaries → structured guidance → actionable output

Grounding

Trusted health information used for educational and safety guidance.

This gives the evaluator the **tool + purpose + 3 prompt excerpts + refinement + references** required by the template, without becoming a text-heavy slide.

Key Learning

The best result came from iterative prompting—not the first prompt.

Prompt → Observe → Refine → Manually configure → Retest

Improvement: Iterative prompting + manual widget configuration produced a more usable NIRA interface.

Test / Iteration	Expected	Actual	Result
Initial prompt	Generate NIRA app	Server issue; output not generated	⚠ Retried
First build	Create app structure	Basic skeleton generated	✅ PASS
UI refinement	Improve NIRA interface	Cleaner UI generated	✅ PASS
Widget refinement	Add widgets for NIRA journey	Widgets added; manually adjusted	✅ PASS
Dropdown request	Simplify widget interaction	Dropdown added	✅ PASS

RISK	NIRA SAFEGUARD
 Privacy	Collect only necessary information; avoid storing sensitive details
 Bias	Simple, inclusive language + multilingual support
 Harmful Output	No diagnosis/prescription + red-flag escalation
 Misuse	Clear boundaries: education ≠ medical advice
 Human Oversight	Encourage professional care when symptoms require it

Bottom highlight

NIRA informs — it never diagnoses.

AI explains → Safety checks → Woman decides → Professional care when needed

For the slide design

Keep it **white background + black text**, with **one small accent color** only.

Use **5 compact risk → safeguard cards**, large text, plenty of whitespace, and no large illustrations.

Analysis of the Value & Impact

- Empowers women with clear, reliable menstrual health guidance.
- Helps users identify red flags early and seek timely care.
- Improves preparedness for doctor consultations and follow-ups.
- Built with privacy-by-design to protect sensitive health data.
- Leveraging GenAI and multilingual support for wider accessibility.
- Lightweight, mobile-first solution for easy adoption and scale.

Challenge 1

Low Health Literacy & Confusion :
Many women lack clear, trustworthy information about menstrual health and when to seek help.

Solution

1. Simple, easy-to-understand explanations.
2. Symptom checker with evidence-based guidance.
3. Red flag alerts and when-to-seek-care advice.
4. Health education in local languages.

Challenge 2

Unprepared Consultations :
Women often forget to ask important questions and miss key details during doctor visits.

Solution

1. Personalized question generator based on symptoms.
2. Notes & insights summary for doctor visits.
3. Track symptoms and cycles over time.

Challenge 3

Privacy & Access Barriers :
Women hesitate to seek help due to privacy concerns and limited access to expert guidance.

Solution

1. Privacy-by-design with secure data handling.
2. Anonymous usage option.
3. 24/7 digital support, anytime, anywhere.
4. Works on low bandwidth devices.

01 Empowered Women

1. Better understanding of their menstrual health.
2. Early identification of issues and red flags.
3. Confidence to make informed decisions.

02 Better Doctor Consultations

1. 2–3X more relevant questions asked.
2. Saves time and improves consultation outcomes.
3. Stronger patient-doctor communication.

03 Social Impact

1. Promotes menstrual health awareness.
2. Encourages timely care and reduces stigma.
3. Supports women's well-being and equality.

04 Scalable & Affordable

1. Mobile-first, easy to use across regions.
2. Multilingual support for inclusivity.
3. Low-cost solution for NGOs, colleges & clinics.

05 Future Growth Potential

1. Expand to PCOS, thyroid, fertility & reproductive health.
2. Partner with healthcare organizations.
3. Data-driven insights to improve women's health.

DEMONSTRATED (Prototype): NIRA prototype delivers symptom understanding, red flag detection, question generation and health insights.

PROJECTED IMPACT: Based on pilot feedback, women's health reports and digital health benchmarks.

ASSUMPTIONS: 1) Pilot with 500+ users 2) 40% users act on guidance 3) 20% improvement in consultation preparedness (self-reported)
